PHP form mailer - FREE easy to impliment Secure PHP contact form

phpFormMailer (easy to use and more secure than many cgi form mailers)
Upgraded and improved 19th Nov 2005, now cleans all input to prevent spammers injecting headers into your PHP mail (stops spammers using your form to send their trash) Sends email to you the site owner and sends a confirmation to the sender including a copy of their query For additional security it checks the referrers you set The Source code is free to use, all we ask is you leave the reference to www.thedemosite.co.uk - Thanks! Just two files to create from the HTML and PHP code
