xml photo album for Flash MX 2004

xml photo album automatically creates album names and places and centers your thumbnails on stage, and creates page holders for the thumbnails. All you need to do is to define the name of the albums, sort images, set the number of columns-rows for thumbnails, and thumbnail size in your XML file. The code resizes images to stay in frame as well. You can also attach notes for your photos too. Even you don't need to do any actionscript. Extremely easy!! Put your files in an image folder and just work on the XML file. Actionscript is attached externally as an AS file, easy to adjust for your web site.
