Rase Desktop based Website Counter

Rase Desktop Counter is a website counter that hides your code from the world but shows it to you on your desktop. This software enables you to watch your number of hits grow realtime. The software is very compact and minimizes to the system tray when minimized, keeping your taskbar free for other programs. You can add multiple websites and track their stats individually. This Hit counter saves you the time and hassle to visit a third party website to view your website stats. You get them on your desktop with a click of a mouse. Ofcourse the software is absolutely FREE to use. This is not a counter that you would use to display your stats on your website. This one is used to view the stats yourself while not showing your traffic to your competitors. Visit the [Rase Desktop Counter Homepage](#) to learn more. Our current users rate it as excellent. We look forward to your reviews.
