## Ajax For Beginners

AJAX allows you to make a call to an http server (typically an RSS feed or a webpage), get it's content and load them into your existing page without having to refresh the whole page. This means that services like email don't have to reload the whole page everytime you click a message, saving on bandwidth (loading the header/footer all over again) and making things more efficient.

### Resource Specifications:

Version:	1.0
Platform(s):	n/a
Date Added:	March 25, 2007
Last Updated:	March 25, 2007
Author:	Seco
