Velakor Notes

Notes is a Ruby on Rails application designed to be a simple and fast to-do and notes manager.

Ajax is used in many places to improve the speed of the application.

Stay tuned for more cool features to come in future versions.

The "Pages" section allows the creation of Notes and To-do lists (items in to-do lists are sortable); you can also add images and files to a "Page". A "Page" can be made public so that anyone can view it.

The "Tabs" section is a list of notes; while "Pages" are designed for temporary storage of information, the "Tabs" section is designed as a permanent archive of notes - also has search functionality.

The "Notepad" section is a simple text area where you can save temporary information.

The "Chat" section allows the creation of chat rooms; you can add users to each chat room. Chatting does not require refreshing the page in the browser.

The "Reminders" section is a place where you can set reminders - notices you receive by e-mail at specified times.

Resource Specifications:

Version:	0.8.1
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	March 28, 2007
Last Updated:	March 28, 2007
Author:	Velakor Software
