Virtual Project Open Source Version

Virtual Project is a fully web based, open source IIS application. It, version 2 now uses SQL Server or My SQL Server databases.

Features: -Manage tasks, bugs, CRs, releases, resources and basic reporting. - Allows for management of staff, projects and multiple organisations/clients. - Different access levels for each staff and give users organisation level administration or Site wide global administration. Basic users can manage any project tasks, issues, CRS or releases, but cannot modify project, staff or organisations -Fully functional system that will save you hours of time tracking projects, no matter where you are.

Version 2 now has file uploading, assigning a file to a project and assigning a task with groups of files. Allows staff importing and also new improved interface with tabs for easier navigation.
