HTTP Request

This program helps construct HTTP requests to send to a webserver to retrieve webpages. Fill in the hostname, port, and file, along with any additional headers you would like to send and it constructs the request and then sends it, showing you the response headers and response body. Supports get, post, and head methods. Useful for debugging requests or just learning how HTTP protocol works. Written in C for Windows, source code included.

Resource Specifications:

Version:	1.0.5
Platform(s):	Windows
Date Added:	January 26, 2006
